Use the Current Population Survey (CPS) data set fro 1962-2006 and the data definitions to answer the following questions.

For the locality the you chose to examine:

(1) How does the CPS define your locality?
(2) Examine the sample size by year of your locality. Do you have a sufficient sample size?
(3) Examine the wages of low skilled workers for each year of your locality. Define low skilled workers as those with at most high school degree or some college.
(4) Examine the wages of high skilled workers for each year of your locality. Define high skilled workers as those with a BS/BA degree or more.
(5) Calculate the employment population ratio in your locality for each year.
