**Project Title:** Survey of Sediment Rich Locations in the Laguna de Santa Rosa

**Faculty Mentor:** Jackie Guilford  
Geography, Environment and Planning  
Email: guilforj@sonoma.edu

**Project Description:** A system has been established where carbon polluters are able to purchase carbon trading credits to offset their carbon emissions. Sonoma County is the first place in California where a similar method is being used to offset water pollution.

**Student Contributions:** Ideally two students are needed that can do in person research in August, gathering samples from the Laguna de Santa Rosa in Santa Rosa and Rohnert Park. Student must be willing to work outside, walk around in the mud, and have their own transportation. The research will comply with all social distancing, mask wearing, and other covid-19 requirements.
